Manage your rack fleet in an ideal way with the SynerTracker app

At Synerglass-Soft, we dedicated our expertise on the management of an essential equipment: the rack.

The rack management often poses concrete problems:

- 📍 Visibility;
- 📍 Real-time location;
- 📍 Availability...

These problems lead to additional costs, such as buying back equipment or stopping production.

Our solution

Locate your racks and manage your stock in a simple and transparent way with SynerTracker.

Thanks to a geopositionning system integrated to your racks, you will be able to:

- 📍 Locate and view your racks on a map;
- 📍 Be informed of the availability of your racks on site or during delivery;
- 📍 Know the duration of immobilization of the racks at your customer or supplier;
- 📍 Optimize your racks recovery rounds.

The advantages of SynerTracker

- 📍 Decrease in equipment buyback;
- 📍 Decrease in additional production costs;
- 📍 Time saved on the management of the racks.

SynerTracker compatibility and use:

The solution is stand-alone and integrates with existing environments. It can complement a localization environment by GPS beacon for example. The SynerTracker app download is quick and does not cause any production downtime.
